

Improve end-to-end emergency management and response

Public Safety solutions from Bell

There is no greater responsibility for any government or private sector organization than to protect the public's and/or employee's right to safety and security. Above all else, effective and efficient response to public safety and disaster management involves complex coordination among multiple agencies, departments and field personnel. ICT (information and communications technology) is therefore a critical foundation from which organizations can ensure safe and secure interoperability, information exchange and interaction.

Until recently, organizations have been coping with disparate technologies and communications tools from multiple sources to manage their public safety processes. In order to optimize public safety resources, organizations must have access to consistent, comprehensive solutions from providers that can address a full range of policy, procedure and critical infrastructure protection requirements.

The solution

Public Safety solutions from Bell provide an end-to-end range of business and IT consulting, implementation, integration, security and infrastructure support services that support organizations through all phases of a public safety initiative. We work with you to understand the complete risk picture, the associated human factors and potential weaknesses in order to deliver the most effective solution for your environment.

Our teams of accredited professionals have extensive expertise in such areas as public safety, risk management, security, ICT and networking.

Services in our portfolio include:

Public Safety Consulting - Bell has an extensive portfolio of assessment and planning services that can help organizations address end-to-end public safety needs or specific portions within that continuum, including risk and privacy policy and audit reviews; technology and implementation planning; and security management and system design, among others.

Public Safety Unified Communications - Bell integration specialists are recognized leaders in key technology areas such as RFID, wireless communications and VoIP, enterprise asset management and tracking, telematics, fleet management, field management, training, enterprise portals and more.

Public Safety Storage - Bell specializes in various technologies and services relating to systems and storage, including internetworking, virtualization, information access, Microsoft, backup and recovery, high availability, disaster recovery and business continuity and assessments.

The Bell logo, consisting of the word "Bell" in a bold, blue, sans-serif font.

Public Safety Cyber Crime - The Bell team of cyber security specialists are recognized leaders in the planning, deployment and security of advanced digital protection and control (P&C) devices used throughout today's high value critical infrastructures, including electrical power grids and related
